

Job position

# Java Backend Developer

## Company

We are a London based Big Data startup developing an AI platform enterprise application for telcos.

## Tasks

We are looking for a Java backend developer who is going to work in an international team on a real-time data processing engine and a big data machine learning solution for telcos.

You will have the opportunity to participate in all phases of the development including design, implementation, testing, documentation, continuous integration, using Java/J2EE technologies.

## Requirements

- BSc or MSc degree in IT or related field OR equivalent experience
- Solid Java backend software engineering skills: code quality, testing, design, automation, version control
- SQL, relational databases
- Linux skills

## It's a plus

- working knowledge of the Spring framework
- experience with building RESTful APIs
- Continuous integration, (e.g. Jenkins)
- scripting in Python
- knowledge of the Hadoop ecosystem
- familiarity with statistics, machine learning
- Github, Stackoverflow profile in the application

## What we offer

- we are flexible regarding the working hours
- it is possible to work remotely from home
- good career opportunity at a high-potential start-up

## Place of work

Budapest/Zagreb

## How to apply
